Muscle Pairs · Tier Pack · Aspire

Learning goal: I can find a pair of arm muscles and show which muscle pulls to bend or make the arm straight.

Aspire Route (Book First)

Explain what would happen if your arm had a top muscle but no back muscle.

Help: The arm could bend up, but it could not go straight because muscles cannot __.

Optional Make It · Aspire

Make a pair rule card

Draw a 3-box strip showing why one muscle alone would leave the arm stuck bent.

Word Help

muscle: a body part that pulls on a bone to make it move

joint: a place where two bones meet and bend

pull: when a muscle gets short and tight to move a bone

relax: when a muscle goes soft and long

Exit Check

Point to the muscle that pulls when your arm bends up: top or back?

What does the partner muscle do while one muscle pulls?

Why do muscles need to work in pairs at a joint?
