Muscle Model · Tier Pack · Independent

Learning goal: I can test a card and string arm model to show how two muscles pull a joint.

Independent Route (Book First)

Complete the 3-row model test table (Pull String A, Pull String B, Push String A) and write one sentence explaining why we need two strings.

Help: We need two strings because one string can only __, so String B must pull the arm __.

Optional Make It · Independent

Label your card arm model

Stick four small labels (Bone, Joint, Top muscle, Back muscle) onto the card arm diagram and write your test results in your book.

Word Help

model: a simple copy we use to test how something works

hinge: a joint that bends and straightens like a door

string: the part in our model that acts like a muscle

card strip: the stiff part in our model that acts like a bone

Exit Check

What body part does the string stand for: bone or muscle?

What happened when you pulled String A while String B

stayed loose?
