Balanced Plate · Knowledge Organiser

Learning goal: I can use a plate guide to see which food groups take up the most space.

Today I Can

I can point to the two biggest parts on the plate guide.

I can match foods to fruit and veg, starchy food, protein, and milk or dairy.

I can say why sweets and oils are kept in a tiny space off the main plate.

Must-Know Words

plate guide: a circle chart that shows how much of each food group we need

portion: the amount or share of a food group on the plate

starchy food: foods like bread, rice, oats, and potatoes that give steady fuel

dairy: milk, cheese, yoghurt, or plant swaps that help keep bones strong

Core Science Steps

Look at the two biggest spaces first: fruit and veg, and starchy food like rice or bread.

Next, find the medium spaces: protein (beans, egg, fish, meat) and dairy (milk, yoghurt, cheese).

Sweets, crisps, and oils sit in a tiny space because

our body only needs a little bit.

Keep the Science Clear

Use the size of each section on the plate guide to check if a meal has enough veg and starchy food.

The plate guide shows food group shares over a day, not a strict rule for a single snack.
