Lever Test · Word Page

Learning goal: I can test how the distance from the pivot changes the effort needed to lift a load.

Words for This Lesson

effort distance: the distance from the pivot to where the effort push is applied

load: the weight or mass being lifted by the lever

independent variable: the one thing we change on purpose (the effort distance from the pivot)

pattern: how one measurement changes when we change another

How to Use These Words

Point to a word when you explain your idea.

Help: At 5 cm it took __ coins, while at 20 cm it took __ coins. This shows that as effort distance increases, the effort needed __.
