Fair Test · Tier Pack · Independent

Learning goal: I can plan a fair test by naming what to change, what to measure, and what to keep the same.

Independent Route (Book First)

Complete the fair-test plan for the parachute investigation (IV, DV with units, 3 controls) and write a scientific prediction explaining why a larger canopy should fall more slowly.

Help: We will change __, measure __ in __, and keep __, __, and __ the same. I predict the largest canopy will take the longest time because __.

Optional Make It · Independent

Make a 3-Flap Variable Planner Card

Fold a card into three flaps labelled Change (IV), Measure (DV), and Keep the Same (Controls). Fill in the parachute test details with units and write your prediction in your book.

Word Help

independent variable: the one factor we change on purpose in a fair test

dependent variable: the factor we measure to see the effect of our change

control variable: a factor we keep the same so the test is fair

fair test: an investigation where only one factor is changed while all others are kept constant

Exit Check

In the parachute plan, what is the one variable we change (independent variable)?

What do we measure (dependent variable) and what unit do we use?
