Solar System Models · Word Page

Learning goal: I can use solar system data and a scale model to link distance from the Sun to orbit time.

Words for This Lesson

orbit time: the time a planet takes to travel once all the way around the Sun (its year)

scale model: a model that shrinks huge real distances or sizes using a fixed rule

astronomical data: measurements of planets such as distance from the Sun, diameter, and orbit time

limitation: something a science model leaves out or cannot show accurately

How to Use These Words

Point to a word when you explain your idea.

Help: As distance from the Sun increases from __ (Mercury) to __ (Neptune), orbit time increases from __ to __. One limitation of the strip model is __.
